

Anish Kumar

Generalist AI Trainer | ML Engineer | BTech AI/ML — Final Year

■ Jaipur, India | ✉ anilkumar780.ak85@gmail.com | ■ anishar-ai.me | ■ github.com/anishkumar

PROFESSIONAL SUMMARY

Final-year BTech AI/ML student at Lovely Professional University with 3+ years of hands-on experience building and evaluating machine learning systems. Proven track record as an AI Training & Evaluation Specialist at Outlier AI, with 500+ LLM responses evaluated for safety, reasoning, and code quality. Proficient in Python, C/C++, deep learning frameworks (PyTorch, TensorFlow), and production ML deployment. Seeking to leverage strong CS foundations and RLHF experience as a Generalist AI Trainer at RemoExperts.

EXPERIENCE

AI Training & Evaluation Specialist

2024 – 2025

Outlier AI · Remote Contract

- Conducted RLHF-style evaluation of 500+ LLM responses for safety, reasoning quality, and code correctness
- Improved prompt acceptance rate by 18% through structured, detailed feedback and annotation
- Developed strong intuition for model failure modes, hallucination detection, and prompt engineering
- Provided pairwise preference rankings and justifications used directly in model fine-tuning pipelines

Independent ML Engineer

2023 – Present

Self-Directed / Open Source · Remote

- Built 6+ end-to-end ML systems across Computer Vision, NLP, and predictive modeling domains
- Focused on production-quality code, inference optimization, and containerized API serving (Docker, FastAPI)
- Designed and documented benchmarks for evaluating model performance on custom datasets

KEY PROJECTS

Real-Time Object Detection System

[Computer Vision]

Built YOLOv8-based detection system on custom 12K dataset. FastAPI serving with TensorRT optimization targeting 45 FPS. Live webcam demo deployed.

Sentiment Classifier — BERT Fine-tuned

[NLP / LLM]

Fine-tuned BERT for 5-class sentiment classification. Production REST API handling 500+ RPS with Docker containerization. Achieved 91% accuracy.

Churn Prediction Pipeline

[ML Systems]

End-to-end churn prediction using SMOTE for class balancing and feature engineering. Real-time Streamlit dashboard for business stakeholders.

Face Recognition Attendance System

[Computer Vision]

FaceNet embeddings with cosine similarity for automated attendance tracking. Serving 200+ users at 80ms latency.

EDUCATION

BTech — Artificial Intelligence & Machine Learning

2023 – Present

Lovely Professional University, Punjab

- Core coursework: Deep Learning, Computer Vision, NLP, Data Structures & Algorithms, Statistics, Databases
- Final year — implementation-focused with production ML systems as major projects

TECHNICAL SKILLS

Languages: Python, C/C++, Java, SQL

ML / DL Frameworks: PyTorch, TensorFlow, Scikit-learn, Hugging Face Transformers

Computer Vision: YOLOv8, OpenCV, TensorRT, FaceNet

NLP / LLM:	BERT fine-tuning, Prompt Engineering, RLHF Evaluation, LLM Benchmarking
DevOps / Deployment:	Docker, FastAPI, Streamlit, REST APIs
Tools:	Git, Linux, Jupyter, VS Code
AI Evaluation:	Response quality assessment, pairwise ranking, hallucination detection, safety review
